

Cleaning of doors and window frames

Doors and windows

The simple cleaning of the window frame is the first important operation for the maintenance of it. Factors such acid rain and air pollution lead to the deterioration of the coating. An annual cleaning allows to remove everything that was deposited on the frame; this simple operation allows the coating to remain long time like a great beauty anti-aging.

Also during this periodic operation it can be controlled if the coating is damaged, acting on these points with a retouching operation. For cleaning do not have to use aggressive agent like alcohol or ammonia because these products damage the coating, reducing its durability. Using neutral detergents, such HH 8011 or HT8011 you get a good clean surface without damaging the coating. Use a soft cloth for apply and dry.

Frequency

At least once a year.

Product to use

- HH 8011 Linea Blu neutral detergent or HT8011
