

Extraordinary maintenance of the window frames

Doors and windows

We can compare the work of retouching to a revision of the frame. During the washing of the frame you can see if the coating has been damaged: scratches or breakage can be easily repair with a simple work, allowing you to avoid further damage to the structure of the frame, caused by water infiltration.

Procedure

This work should be performed only on the part to be repaired. After identifying the damaged parts, and after cleaning the surface with HH 8011, it is applied by brush HF 20xx Linea Blu clear waterbased topcoat or HL 20xx waterbased enamel.

When the paint is dry, check if the damage has been repaired effectively and, if necessary, apply a second coat.

If the damage of the surface is such that it can not be repaired with a small operation should be necessary a real recovery.

Frequency

Depending on the state of the coating.

Product to use

- Brush with bristles natural / synthetic
- HF 20xx Linea Blu clear waterbased topcoat or HL 20xx Linea Blu waterbased enamel
